

Enable Chapters Information in MO 4Media

(only Android TV app)

Before you can use chapters in MC and MO 4Media you have to produce a chapters xml file.

The easiest way is to load the **gMKVExtractGUI** program

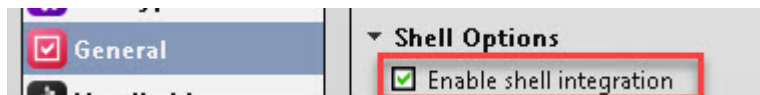

(<https://sourceforge.net/projects/gmkvextractgui/>). Drag and Drop the .mkv file to the Input field and export the chapter file in XML format. The exported file should have the same name as the video file with the extension .xml.

You can edit within the xml file the Chapter-Names, but this is up to you.

1. Go to MC -> **Tools -> Options -> General**

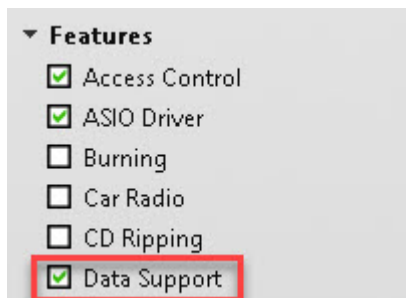

Scroll down to **Shell integration**

Make sure that: **Shell integration** is selected

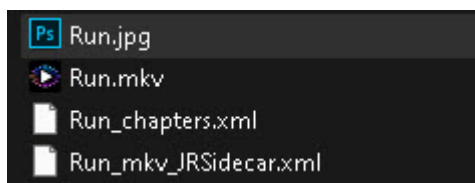

Scroll down to: **Features**

Make sure that: **Data Support** is selected.

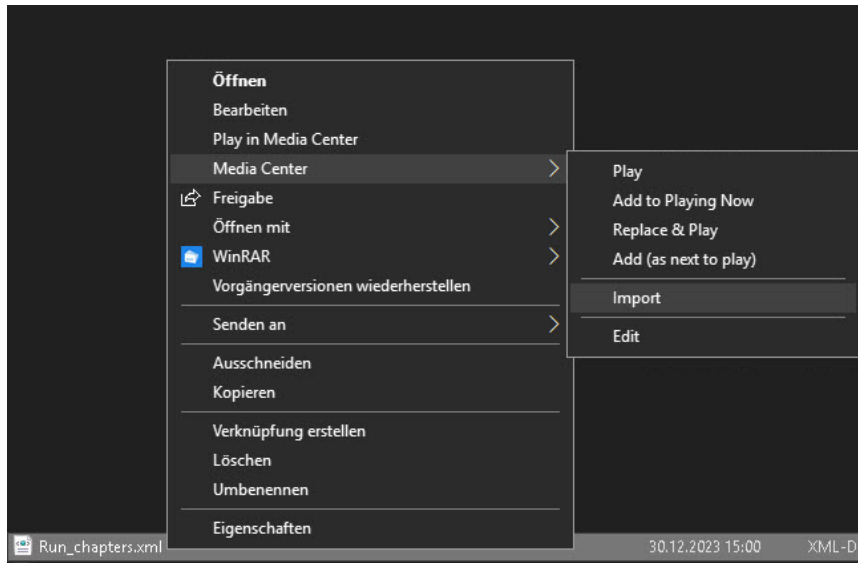

Save with **OK** and restart MC.

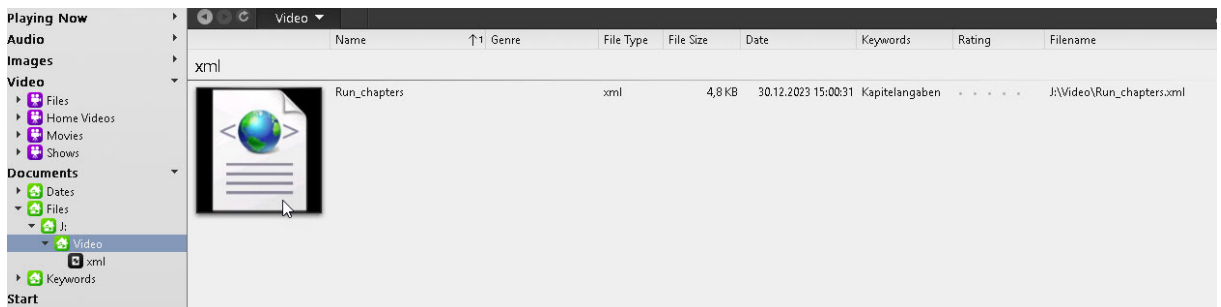

2. Go to your movie folder and store the generated xml file to this folder.
It should look like this for example:

3. Within the Windows Explorer, make a left click on the chapters xml file and select from the context menu: **Import**.

4. In MC you should see on the left side a new section: **Documents**.

Click on **Files** and then select the new imported file.

Open the **TAG-Editor** and change the **Movie Title** of the imported file to the **exact Movie Name Title** in MC with the extension **_ chapters**. See example above.

Restart MC and go to MO 4 Media on your Android TV, do a re-connect and select the movie. You should see the correct chapters.

Enjoy.
